Disclaimer

This recommendation of a content list for medical devices and other paraphernalia is for informational purposes only.

Disclaimer: The following recommendation of a content list for medical devices and other paraphernalia is for informational purposes only. Please note that it is a recommendation only and does not constitute medical or legal advice. Some of the listed paraphernalia require special training to use safely and effectively. In addition, it is important to comply with country-specific laws and regulations regarding the possession and use of medical devices. Use of the recommended content list is your own responsibility. Neither the author nor the platform on which this recommendation is provided assume any liability for any damage, loss, or injury that may result from the use of the listed medical devices. It is strongly recommended that you undergo training from qualified personnel before using any medical devices. Please note that country-specific laws and regulations regarding medical devices may vary from country to country. Make sure you know and comply with your country's applicable laws and regulations regarding the possession, use, and transportation of medical devices.

Important points in the event of a shooting accident with injuries:

Ensure safety:

Have fires ceased, establish security at the stand, disarm casualties and unload weapons, place casualties' weapons and equipment in a secure area

Call emergency numer:

Immediately dial your country's emergency number (e.g., 112 in many European countries) and inform emergency services of the incident. Describe the situation as accurately as possible and give the exact location or address of the shooting range (shooting accident area safe).

Provide First Aid:

Provide first aid to the injured according to their level of training. Ensure their safety and try to prevent further injury.

Handover to professional rescuers:

Make sure rescuers can get to the patient as quickly as possible. Cooperate with the rescuers, follow their instructions and give them all the information they need to provide appropriate care to the injured.
